

An Ongoing Commitment to Training

Members of our Design, Truss Tech Support, and Inside Sales departments have been participating in on-line Truss Technology Workshops (TTW) being conducted by the Wood Truss Council of America (WTCA).

Difficulties in arranging travel and timing are eliminated when taking on-line training. It allows for more participants to become involved on their own schedules. Cascade Mfg Co has 25 or more employees involved in Level I or Level II training.

The purpose of Level I training is to examine industry design standards and factors affecting truss fabrication from design to installation. Level II has, as its purpose, the advancement of skills in math, load development, building code compliance and increases familiarity with current technical resources for the industry.

The participation by our employees in this ongoing training is Cascade's commitment to providing all of our customers with excellence in components. It is your assurance of getting the job done right—the first time.

Trus Joist™ ... Beyond Residential

When discussing engineered lumber products, there is **ONE** name associated with this product category—Trus Joist™. The company who virtually created the market for this category, Trus Joist™ has continued to develop new products and processes for use in residential construction for over 40 years.

What may not be widely known is the wide range of products available from Trus Joist™ for use in commercial construction. Products available vary from deep wide flange TJI® joists to open-web joists, radius and tapered joists, and Microllam® LVL beams.

A dedicated group of technical Trus Joist™ commercial representatives are available to assist with the design, recommendation, specification, and pricing for cost-effective roof and/or floor products on your next commercial project.

Please contact us for any updated literature you may need. If you would like information on Trus Joist™ commercial products or if you have a project you would like to have priced, please e-mail your request to insidesales@cascade-mfg-co.com or call us at 800/942-4685 and ask for one of our Trus Joist™ commercial estimators.
