Take a Closer Look at TimberStrand[®] LSL

iLevel[™] by Weyerhaeuser is the leader in developing innovative products to improve residential construction. Trus Joist[®] has been the driving force behind this progress. One of the ground-breaking products developed by Trus Joist[®] is TimberStrand[®] Laminated Strand Lumber (LSL). TimberStrand[®] LSL is used in a multitude of products. From flanges used for TJI[®] joists to Rim Board, to columns, stair stringers and studs. TimberStrand[®] provides exceptional strength and value.

Want another example?

How about TimberStrand[®] 1.55E LSL headers?

- 3 1/2" thickness means faster installation.
- A higher shear rating for headers than Laminated Veneer Lumber (LVL) or Parallel Strand Lumber (PSL).
- One for one header substitution for LVL or PSL in most cases.
- LSL headers may allow a larger diameter hole, making it a better choice for use around stair openings.

All of these benefits plus a lower cost.

Now, do you need any more reasons not to take a closer look at TimberStrand[®] for more areas on your next construction project? Call us today for more information - 800/942-4685.
